

IN THE SPECIFICATION

Please amend the paragraph beginning at page 14, line 27, with the following  
rewritten paragraph:

a1 The control unit 10 comprises: a main control circuit 11 using a microcomputer; and a memory 12. At this memory 12, there are provided: a program storage region; a control data storage region; and reception/transmission data storage region. A program required for control operation of the main control circuit 11 is stored in advance in the program storage region. Control data required for execution of the above program, communication ~~part's~~ party's telephone directory data and the like are stored in the control data storage region. Data to be transmitted by the W-CDMA scheme and BT scheme or received data is stored in the reception/transmission data storage region.

Please amend the paragraph beginning at page 17, line 16, with the following  
rewritten paragraph:

a2 The BT radio section 6 receives reception speech data transferred from the mobile telephone set MS in a radio manner in accordance with the BT scheme at the hands-free mode, and inputs the data to the echo canceller 5. In addition, the transmission speech data outputted from the echo canceller 5 is transmitted to the mobile telephone set MS in a radio manner. Reference numeral 61 denotes an antenna 6a for receiving/transmitting a radio signal in accordance with this BT scheme.
